

## **Pre-Operational Checks**

To be undertaken by the operator <u>each day</u> before first use:

- 1. Engine and hydraulic oil levels.
- 2. Tyre inflation pressures and general condition of tyres.
- Hydraulic hose system for leaks (look for fresh oil stains on ground) and for pipes and hoses to be secured to prevent damage.
- 4. Grease/oil pivot points and moving parts where applicable.
- 5. Cabin access/egress, seating, seatbelts, loose objects.
- 6. Visibility windscreen, washers, wipers, demister, mirrors.
- 7. Wheel nut tension.
- 8. Condition and tension of chains and sprockets (if applicable)
- 9. Fuel level
- 10. Exhaust for damage/holes that may contribute to excessive noise
- 11. All controls, linkages and cables to be free from damage and operate smoothly and freely (eg. Engine speed, forward/reverse, luffing and slewing, steering controls)
- 12. Travel brakes are operational

Check Performed By:

Date:

13. Visually check stress areas such as hooks, chains, pivots, tracks for signs of cracking & fatigue

/ /

Routine inspections should be carried out at no greater than 3 monthly frequency.
Inspections should be more frequent for equipment operating in a continuous daily manner or under harsh conditions.
