

Core Drill Safety Instructions

Read all safety warnings and all instructions.

Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

Careless or improper use of a core drill could cause personal injury.

- Do not use any tools if damage is suspected.
- Have a fire extinguisher and first aid kit nearby
- Use a barrel that is suitable for the machine and the material to be cut.
- Check for suitability before cutting dry, and ensure operator is using correct PPE (Respirator mask and eye protection).
- Check barrel for damage before installing.
- Check machine condition before performing any cutting operations.
- Check for a tight fit to the shaft of the drill.
- Check condition of barrel regularly.
- Check all electrical cords and plugs (if applicable) and protect them from water.
- If you are drilling dry, always be aware of the **danger** of breathing in the dust. Ensure a dust extraction system is used with a suitable filter fitted. Use a half face respirator or a PAPR (Powered air purifying respirator).
- If you are drilling wet, the slurry created can dry out and create a hazard for other users - dispose of slurry as per your local regulations.
