

# Paddock Spreader (Walk Behind) Operating Manual

## 'Paddock' Walk Behind or Push Lawn Broadcast Spreader

-Spread grass & lawn seeds, fertiliser, sand, gypsum, lime and pellets

A quality seed and fertiliser spreader should be in the shed of every home gardener, landscaper and acreage owner. This is versatile lawn and garden accessory capable of dispensing and spreading many types of granules and pellets from seeds to fertilizers and sand. Paddock designs it's spreaders to last, with full UV and weather resistant PP hopper, powder coated frame, puncture resistant tyres and stainless steel fixtures and Nyloc nuts. This is a seeder which will serve you for decades!

The operation is simple and due to the large tires it is easy to push and maneuver so the spreader can be used by people of all physical abilities. To use the spreader simply fill the hopper with grass seeds, fertiliser etc, start pushing the seeder, then using the conveniently located hand controller, open the slots in the bottom of the hopper to allow the seed to flow. By pushing the spreader the wheels will turn the spreader plate or paddle which distributes the seed or fertiliser. Being a conical hopper it will drain to the bottom dispensing all the contents. Mounted to the rear of the spreader are two stand legs so it will self stand when not in use. The gears in the drive come pre greased and require very limited maintenance. The handle height is adjustable so this spreader can be set up for people of all heights. Soft padded grips make the spreader comfortable and safe to operate.
