

Assessment Number: 1		Assessment Date: 16/2/2023
Plant Type:185 CFM Air CompressorPlant Make:Atlas CopcoPlant Model:XAS 185		Assessment Facilitated by: Leigh Evans (Admin/Accounts Manager)
Asset/Fleet/Rego No: W63 415/W63 416 Plant Serial No. WUX663718/WUX663789		Assessment Participants: Chris Feldbauer (Director)
Plant Owner Name: Northern Hire Group		Follow up Assessment (See below for Revision No.)
• plant ope • anyone w	rators /orking, or in the \	list, consider the hazards that may affect: <i>r</i> icinity of, the plant ed, such as visitors, pedestrians, contractors, etc.
Is the plant designed to perform the task?	Yes <del>No</del>	
Has the plant been modified from the original condition?	<del>Yes</del> No	
Is the plant in good working condition and free of weeds & mud?	Yes <del>No</del>	
All identified action items closed out/addressed (plant checks)?	Yes <del>No</del>	
Is the plant safe to operate? (On completion of PHA and action closure)	Yes <del>No</del>	Date: 16/2/23 Signature:

This document has been developed as a guide to identify hazards on plant only.

This Risk Assessment has been conducted to the guidelines as detailed in the Worksafe booklet "Plant Hazard Checklist"

#### Workplace hazards have not been identified.

Job safety analysis (J.S.A) - Safe Work Method Statement (SWMS) is required to identify workplace hazards.

Operators must take into account Job Safety Analysis when operating mobile plant.

This assessment is conducted under a static condition as per Occupational Health & Safety Regulations Victoria 2017. A site specific assessment should be conducted at each change of location. Refer to Plant Regulations/National Standards for Plant (NOHSC).

#### **Action and Approval Scheme**

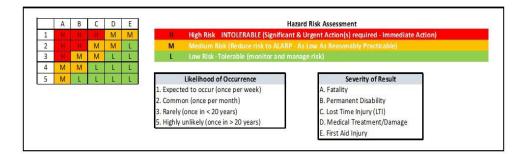

These suggested timings and tolerance levels in the Action Table will be overridden by specific policies of the company that either dictate shorter timeframes for corrective action or zero tolerance. For example, the company has a zero tolerance policy for Safety and Environmental risks.

The decision to tolerate a risk or capture a opportunity should be based on a consideration of:

Whether the risk / opportunity is being controlled to a level that is reasonably achievable;

Whether it would be cost-effective to further control risk or capture the opportunity;

Whether the user wishes to tolerate risks / opportunities of that type

#### Dibistaliameer:

This Plant Plant & Bisk A& Bis

This assessment provides information that is based on a minispection that was made on the date noted on the assessment over sheet. If lany addition a bearmaded on this mobile it is a satisfactory level of a acceptance.

AAlhazadsisdeetiliieddrinhtisisdocomeentmasbbeeretiliieddwiftinin22tdagsobdataeisistedoonhtisisdorm.

If If a lists are not to exit like dini 22 to a syst this is to come on become shall lad of viold.

#### COMMENTS:

This Hazard Identification and Risk Assessment has been prepared based on several key assumptions:

- 1. That all examples of the plant currently in service are as per their original specification.
- 2. That all examples of the plant have not been modified in any way without the prior written consent of the manufacturer or owner.
- 3. That all examples of the plant are operated and maintained in accordance with the Manufacturer's Instructions and with all applicable statutory requirements.

Northern Hire Group have made every attempt to identify all reasonable foreseeable operating circumstances in preparing this assessment, however no guarantee as to the completeness of this Assessment is provided or implied.

You should always check any applicable legislation and make your own judgement about what action you may need to take to ensure you have complied with the law.

It is the responsibility of the Employer, Contractor, Operator(s) to assess and identify any site or operation specific hazard associated with the use of this equipment specifically applicable to the task to be carried out and to where the equipment is to be used or located. They must assess the risk potential for each of the identified hazards and ensure that all reasonably practicable steps are undertaken to ensure those risks are effectively controlled.

All operators must be trained and competent in the use of this plant and hold appropriate qualifications as required by applicable regulatory requirements.

Operators of the plant to which this Risk Assessment refers must read and understand the instructions for Use and Warnings contained in the Operator Manual, or supplied with this Assessment, prior to use.

All daily Pre-Start checks, Routine and Periodic Inspections, Maintenance and Repairs to this plant must be carried out in accordance with the requirements of applicable Australian Standards.

#### NOTES:
